10 Ways to Go Green

www.livescience.com

- One Bright Idea

Switch to compact fluorescent light bulbs (CFLs). They cost more than regular incandescent bulbs, but they last about 10 times longer and they use 75% less energy.

- Seeing Stars

Purchase energy-saving, Energy Star rated appliances/electronics.

- Paper nor plastic

Bring your own reusable canvas totes the next time you're in the supermarket. Petroleum-based plastic isn't biodegradable.

- No soliciting

Opt out of paper catalogs - browse online. Remove yourself from direct mailing lists.

- Get Better Mileage

Buying produce locally, you can reduce your "food miles" - the distance your food has to travel to get from the farm to your plate.

- The 3Rs

Reduce, Reuse, and Recycle.

- Get off the Grid

Opt for clean, renewable energy if offered in your area. Wind, solar, and hydroelectric power reduce our dependence on coal-burning power plants.

- Slay Energy Vampires

Americans pay \$1 billion a year to power TVs and VCRs/DVDs while they're off. Plug adjacent equipment into a surge protectors and flip the switch off when you go to bed. Household appliances and their "pointed teeth" plunge deep in the wall socket, draining power, even when switched off.

- Go Au Naturel

Choose natural non-toxic methods of cleaning and controlling pests.

- Build it Green

Choose furniture made from eco-friendly sources. Look for furniture that is durable.
